

The Oticon CROS family

A revolutionary sound experience for single-sided deafness

oticon
life-changing technology

Oticon CROS/BiCROS

Innovative solutions for
single-sided deafness

We understand the struggle of living with single-sided deafness (SSD). When you can hear from only one ear, sounds coming from other directions are difficult to understand. Missing sounds and conversations on your “bad side” is a constant frustration. Relying on just one ear to hear, especially in difficult listening environments, is tiring and challenging.

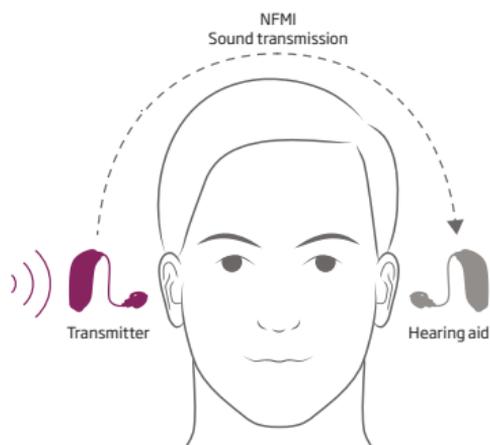

Oticon CROS PX miniRITE R and Oticon CROS miniRITE T are the solutions you've been hoping for, providing valuable and life-changing benefits:

- Hear more sounds from all directions – even from your poorer hearing side
- Stay focused and understand conversations, even in noisy environments
- Ability to be aware of sound from poorer ear side when watching TV or streaming music and audio
- No surgical procedures necessary
- Rechargeable option with Oticon CROS PX

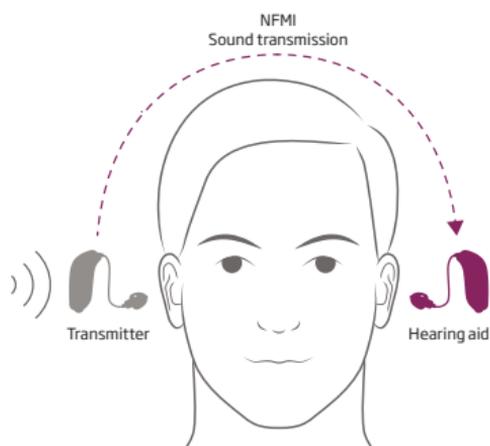

You don't have to compromise on your hearing anymore. With Oticon CROS/BiCROS, you can actively participate in conversations all around you.

The Oticon CROS PX/CROS

hearing devices consist of two parts:

A transmitter with a microphone that wirelessly picks up and sends the sound from your poorer ear to the better ear.

A hearing aid that picks up the sound from the transmitter and plays it in your better ear.

Connect to the world around you

Innovative TwinLink™ dual-streaming technology in Oticon CROS PX/CROS makes it possible to connect to external audio streams like music or TV, while enjoying sound transmission from your poorer ear to your better ear at the same time.
