Better hearing begins here

oticon
life-changing technology

We hear with our brains, not our ears

Both of your ears work together to pick up sound occurring around you

Your brain makes sense of sounds by matching them to sounds stored in your memory

Your ears convert sounds into nerve impulses that travel to your brain, which needs as much sound detail as possible to turn these sounds into meaning

Hearing is crucial for your health and quality of life

When you take care of your hearing health, you take care of your quality of life and your overall health.

- Social Impact
- Health Care Impact

Source: Better Hearing Institute, betterhearing.org

Hearing loss disrupts the **normal relationship between your ears and your brain**

Your brain receives less sound information

This makes it harder for your brain to recognize sounds

Having to guess what people are saying forces you to concentrate harder

The extra effort leaves less mental capacity for remembering conversations

You feel more tired after conversations

You are more tempted to withdraw from social interactions

How can technology **help your brain hear more naturally?**

Provides full and balanced
access to all sounds

Preserves the important
details in speech

Reduces the effort
involved in listening

Improves your recall
of conversation

Helps your ears work together to
identify where sound is coming from

Takes your personal listening
preferences into account

MoreSound Intelligence™

New BrainHearing™ technology works more like the brain because it learned through experience

MoreSound
Intelligence

Scans the
environment
500 times
per second

Organizes
and balances
all sounds
around you

Uses a Deep
Neural Network
to process the
full sound scene

Provides a more
precise, natural
representation
of all sounds

Allows you to
get more out
of every
conversation

More connections More conversations More life

Hands-free communication plus a wide range of connectivity options

- Two-way hands-free phone and video calls from select iPhones and iPads and direct streaming from select Android™ devices.*
- Make hands-free calls from any smartphone or connect a remote microphone with ConnectClip
- Stream sound directly from your TV with Oticon's TV adapter

Made for
iPhone | iPad | iPod

Works with
android

The Oticon ON app lets you personalize your listening experience and fine-tune the sound when streaming.

Oticon RemoteCare allows for online follow-up appointments and remote adjustments with your hearing care professional.

Download on the
App Store
