**BrainHearing™ technology**

*Oticon More™ works more like how your brain works because it learned through experience.*

It’s the world’s first hearing aid with a Deep Neural Network embedded on the chip, trained on 12 million real-life sounds. All three levels of Oticon More provide access to the full and balanced sound scene. However, they differ in the amount of support they give the brain in terms of speech understanding, noise reduction, clarity, and personalization of the listening experience.

MoreSound Intelligence™

- Trained with 12 million real-life sound scenes
- Works more like the brain because it learned through experience

**Traditional technology**

- Traditional directionality - focusing on one speaker, while suppressing all other sounds.

**Oticon More 1**

- The easiest listening experience with maximum reduction of background noise and rapid reduction of loud noise coming from specific directions while preserving speech.

**Oticon More 2**

- An easier listening experience with moderate reduction of background noise, and reduction of loud noises from specific directions while preserving speech.

**Oticon More 3**

- An improved listening experience with basic reduction of background noise, and reduction of loud noises coming from specific directions while preserving speech.
