

Getting started

with the Opn miniRITE rechargeable solution

Six easy steps to changing your client's Opn miniRITE to a convenient rechargeable solution

1 Remove pin

2 Remove old drawer

3 Insert new drawer

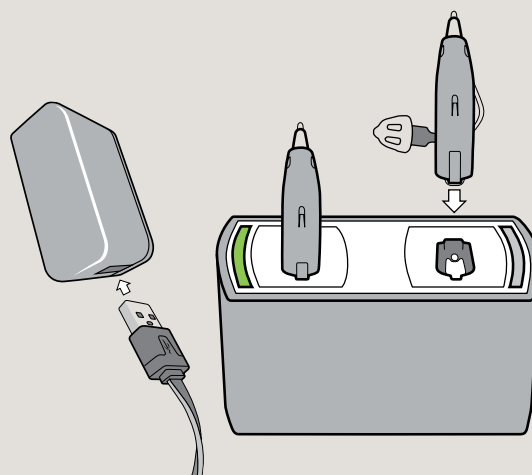

4 Insert pin

5 Put in rechargeable battery

6 Plug in and place in dock

REMEMBER! Give the client the original ZPower packaging along with the Opn battery drawers.

Questions and answers

How many hours of use can be expected when using a silver-zinc ZPower rechargeable battery?

Which Oticon Opn hearing aid styles are compatible with the ZPower rechargeable solution?	The dedicated Zpower rechargeable solution is compatible with Oticon Opn miniRITE devices.
Will fitting an Opn miniRITE with a ZPower battery drawer affect the fitting in Genie 2?	The ZPower battery drawer will not affect the fitting's available features in any way. The ZPower option works independently of Genie 2.
Is the open sound experience available when the ZPower battery drawer is mounted?	Yes. All Opn miniRITE features are available when using the ZPower product.
Are there any changes to the warranty of the Oticon Opn hearing aids when they have been modified with a ZPower battery drawer?	When the Opn miniRITE has been modified with the ZPower battery drawer, the warranty for the Opn miniRITE is unchanged. The Zpower charger and battery drawers have their own accessory warranty.
Does the silver-zinc ZPower rechargeable battery require any special care or maintenance?	The ZPower solution does not require any special care or handling beyond what is ordinarily expected from hearing aid care. Commercial hearing aid drying kits can also be used with the ZPower rechargeable solution. Remind the patient to store the rechargeable batteries in a safe place when not in the hearing device.
What happens if a disposable zinc-air battery is placed in the charger?	The charger is able to distinguish between ZPower batteries and disposable zinc-air batteries. The LED light on the charger will light red if hearing aids with zinc-air batteries are placed in the charger.
What is the lifetime of the silver-zinc rechargeable batteries?	The battery lifetime depends on the recharging cycle and how much the batteries are drained between each cycle. The batteries are designed to last more than a year, based on daily wear.
