PEOPLE FIRST

## Oticon Opn™ the first hearing device that revolves around you

When you have hearing loss, fewer sounds reach your brain - so it has to work harder to make sense of them. This is especially true when sounds come from different directions.

But with Oticon Opn, you can hear what you want to hear, even in complex listening environments like restaurants or large gatherings. Opn processes sounds 50 times faster<sup>†</sup>, giving your brain total access to the sounds around you. Because it works in harmony with your brain, it puts you - not your hearing device - in charge of which sounds you focus on.

<sup>†</sup>Compared to Inium Sense

## Savor every sound the way it's meant to be heard

The latest research shows how effectively Oticon Opn can help you interact with multiple speakers while significantly reducing your listening effort.\*

This empowers you to participate actively in the same noisy environments as people with normal hearing\*\* - even places you've found too demanding in the past. With Oticon Opn, you can focus on being part of the conversation instead of straining to understand.
