life-changing technology

Brighter futures begin here: **Oticon's dedication**

At Oticon, we recognize that hearing care is essential for children's development and overall well-being. Our innovative programs and solutions cater specifically to pediatric patients, ensuring they have the best possible outcomes. From the world's first pediatric hearing aid that learned the way children learn, through experience, to classroom-friendly wireless microphone systems, we're committed to supporting every child's journey to better hearing.

But our commitment goes beyond products. We've developed multiple programs and streamlined processes to make it easier for you to help your pediatric patients. Whether it's our various programs or ongoing support and resources for parents and caregivers, we're here every step of the way. Because when it comes to hearing care, every child deserves a brighter future.

**Our commitment is to you, your pediatric patients, their families,
and the future of hearing care!**

Over the past ten years, the William Demant Foundation has awarded more than 150 million USD to a variety of causes. The focus has been on projects that promote research and dissemination of knowledge in audiology.

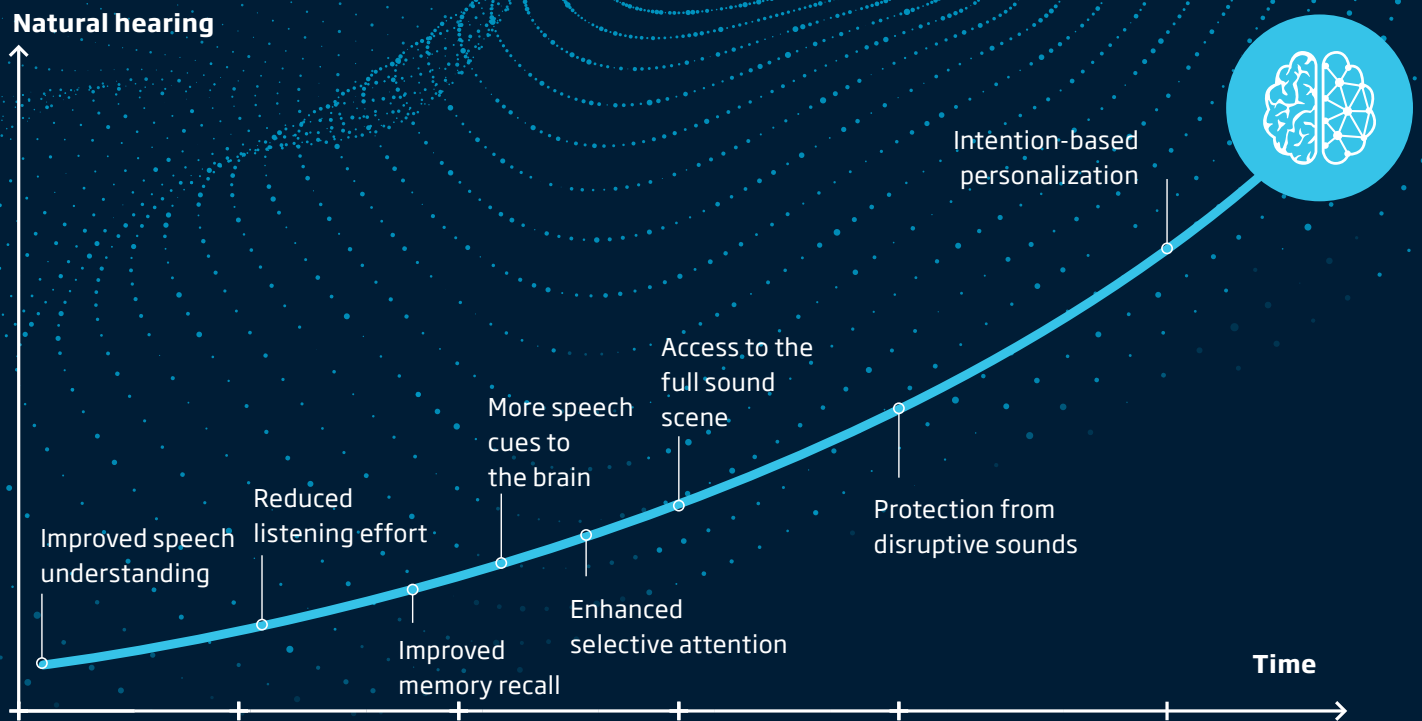

Generations ahead with BrainHearing

Our brains develop rapidly from before birth through adolescence, with experiences shaping cognitive growth. Independent research shows that children need access to all sounds for proper development. Without it, those with hearing loss may fall behind.

Through proven BrainHearing technology, Oticon hearing aids give children access to the full sound environment in a more natural way. The result is optimal support for children's language, learning, and social development.

Oticon has always taken the approach of developing hearing care technology that supports the brain in making sense of sound. We call this unique thinking BrainHearing™, and it's foundation for the technology we've been building on for more than a decade.

Your powerful partner for pediatric success

Partnership

We are committed to partnering with you to provide exceptional service and peace of mind to your pediatric patients and their families through the following offerings:

Peace-of-Mind Exchange Program

Exchange the hearing aids within the first year of the fitting, should hearing loss change

Five-Year Warranty

Comes standard, including repairs and one-time loss per ear (no loss claim fees)

Express Exchange

Reduce office visits and wait times by receiving replacement hearing aids before sending back the current set for in-warranty aids

Kickstart Program

Helps patients get their new hearing aids and earmolds while funding is being secured

Clinical efficiency made easy

With our convenient solutions, we streamline clinical processes and enhance efficiency, making us the perfect partner for your practice.

- **REM Autofit** – Streamlines fitting verification right within the Genie 2 software
- **Best Practices** – Genie 2 defaults automatically to AAA pediatric amplification guidelines
- **Easy-to-Use Remote Microphone Receivers** – No need to uninstall, reinstall, or purchase remote microphone receivers for school or home accessory use
- **Better First Fits** – Oticon Play PX achieves an accurate first fit to DSL5 targets more often than its top competitor

We have a dedicated pediatric team ready to help you!

The freedom to think unlimited thoughts drives our research

Centered around the needs and well-being of patients, the **Eriksholm Research Centre (ERC)** in Snekersten, Denmark collaborates closely with leading global academic institutions. This collaborative effort is **dedicated to exploring effective ways of addressing hearing loss in the long-term, leading to remarkable audiological breakthroughs** with the potential to profoundly enhance the future of hearing care.

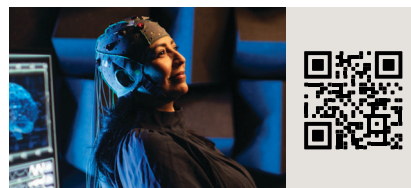

By seamlessly integrating Eriksholm's pioneering psychoacoustic research with our state-of-the-art engineering capabilities, Oticon consistently introduces innovative products **rooted in our BrainHearing™ Technology**. This integration not only solidifies our role as a technological leader in the field but also positions us as industry thought leaders, driving the narrative in auditory research and paving the way for future advancements.

Additionally, **Knowledge and Implementation in Paediatric Audiology (KIPA) Group** is a proud part of Oticon, which aims to identify and understand gaps in pediatric audiology, and find solutions to implement best practice when working with children. KIPA meets twice a year and collectively works on specified areas of interest in pediatric audiology that will be most relevant to audiologists in schools, hospitals, and clinics.
