Activating the instrument for the first time

When turning your instrument ON/OFF

1. The battery drawer is closed.
2. The volume control is turned up.
3. The function switch is set to a microphone program.

Replacing the battery

Your battery size is 675. A worn out battery should be removed immediately and disposed according to local regulations. When battery power is low, you will hear two beeps. If the LED status indicator is programmed to be steady on, it will turn off. This indicates that it is time to change the battery. It is not an indication of malfunction. To replace the battery, follow these instructions:

- Open the battery door completely by pushing the raised edge at the bottom of the instrument.
- Remove the old battery.
- Remove the sticky label from the + side of the new battery.
- Insert the new battery (size 675, preferably dedicated super power battery). Ensure that the positive (+) marking faces the positive (+) sign printed on the battery door.
- Close the battery door. If you feel any resistance it could be that you have placed the battery incorrectly. Reinsert the battery and try again.

Putting on your instrument

Place the tip of the mold in your ear canal, slightly twist, making sure that the top part of the mold (A) is pushed behind and under the fold (B) of your ear.

Gently pull your ear and press the mold in the direction of the ear canal.

With the mold positioned correctly in your ear, place the HI behind your ear by lifting its lower part and sliding it over the top of your ear.
To keep the battery out of reach of infants, small children and people with cognitive impairment, a tamper-resistant battery door should be used.

Instructions:

1. To remove the battery, open the battery drawer. (If a DAI or FM shoe is attached, the shoe has to be removed).
2. Insert the end of a ballpoint pen or the like into the small recess in the corner. Push the battery with the ballpoint until the battery is released.

**IMPORTANT NOTICE**

- Do not force the battery door beyond its fully opened position.
- Insert the battery correctly.
- Excessive force can deform the battery door, which will reduce its tamper-resistant effectiveness.

The volume wheel may be activated. The volume wheel allows you to adjust the volume to specific situations to the level you feel comfortable with.

- The preferred volume level can be indicated by 3 beeps. This level has been programmed according to your preferences. Consult your Hearing Care Professional if you find this level too loud or too weak in most situations.
- The volume wheel has markings 1, 2, 3 and 4 and a ‘click’ position.
- Turning up the wheel increases the volume. Maximum setting (4) gives you the loudest sound.
- Turning down the wheel decreases the volume. Minimum setting (1) gives you the quietest sound.
- If you turn the wheel below 1 you can feel a ‘click’ and the instrument turn off.
- The volume control can be disabled if you do not wish to use it. This will also disable the off functionality.

The telecoil is a receiver for audio signals transmitted from an inductive loop installation. The telecoil is meant for telephone* conversations and for loop systems in places such as theatre, churches or lecture rooms.

- The hearing instrument’s telecoil is activated by the setting the function switch to the proper program. When activated, you will hear a certain number of beeps corresponding to the telecoil program.
- See the “Hearing program description” for where the telecoil program is placed.

This logo incorporates the universal symbol for hearing assistance, the “T” signifies an available telecoil compatible system.

* Requires a telephone with built-in teleloop. Teleloop is a common standard for assisted listening and transmits the audio to the telecoil in the hearing instrument.

Your hearing instrument has a 3 position function switch for changing between different programs.

- When you switch between different programs, your hearing instrument will beep.
- Operate the function switch to change program. The number of beeps will indicate which program you are using if beeps are enabled.

#### Programs (optional)

- One beep, when you switch to program 1
- Two beeps, when you switch to program 2
- Three beeps, when you switch to program 3

#### Volume control (optional)

- One beep, when you switch to program 1
- Two beeps, when you switch to program 2
- Three beeps, when you switch to program 3

#### Telecoil (optional)

- One beep, when you switch to program 1
- Two beeps, when you switch to program 2
- Three beeps, when you switch to program 3

#### Tamper-resistant battery door (optional)

- IMPORTANT NOTICE
  - Do not force the battery door beyond its fully opened position.
  - Insert the battery correctly.
  - Excessive force can deform the battery door, which will reduce its tamper-resistant effectiveness.
