

Immediate acceptance,
immediate benefits

Meet Oticon Intiga - the WOW of **better hearing**

By being extremely easy on the ear and easy on the eye, Oticon Intiga makes worries fade away. And by making the myriad of sounds in life stand out more clearly, Intiga **makes you feel more connected to the world** than ever.

With designer instruments like the new Oticon Intiga you get the most **discreet** and **high performing hearing solution** you can wish for.

Discreetness

is so much more than size

If discretion is what you want, Oticon Intiga delivers. The subtle, petal-shaped shell rests in shadow at the top of your ear, away from prying eyes. And the transparent tubing is thin enough to virtually disappear against your skin.

Inside Intiga, fully automatic functionality means you won't have to fiddle with switches and draw unnecessary attention to yourself.

And 10 different colours including hair and skin-tones, vivid lilac and pure white offer you the freedom to tread softly or boldly into **the world of better hearing...**

Get more out **of life**

Oticon Intiga is not just another hearing device. It is designed to be immediately acceptable and bring immediate benefits to people with mild to moderate hearing losses.

The advanced sound processor in Intiga is designed to work with your brain in the most natural way to help you locate, select and follow all the sounds you want to hear.

Whether it's productive days with colleagues, relaxing evenings with family or entertaining weekends with friends, **Intiga helps you live life to the full.**

Feel good right away

Appreciating how important it is to feel comfortable with your hearing devices, Oticon Intiga aims to provide **immediate and lasting satisfaction**.

Users of Intiga have expressed being happy with Intiga, right from the start. Having experienced how much easier it became to recognise individual voices and understand what others are saying, they had no desire to return to the way things were.

The colours of Oticon Intiga

Keeps you connected in practically all situations

Oticon ConnectLine is a complete system that helps you **get more out of your hearing** in more situations than ever. With the Oticon Streamer, you will be able to control a wide range of standard wireless Bluetooth™ devices - and even adjust the volume and programmes of your Intiga instruments.

With ConnectLine you can turn your Intigas into a wireless headset for a mobile or landline phone.

ConnectLine also works with your television, PC and even your iPod, iPad and other music players.

If this idea sounds enticing, ask your hearing care professional for more details.

People First

People First is our promise to empower people to communicate freely, interact naturally and participate actively
